Arthroscopic Rotator Cuff Repair – Evaluation and Surgical Technique Goals and Objectives

Course Description

"Arthroscopic Rotator Cuff Repair – Evaluation and Surgical Technique" is an online recorded video of a previously presented live CE webinar for rehabilitation professionals that examines surgical management of rotator cuff tears using arthroscopic techniques. This course includes a review of current literature relating to rotator cuff anatomy and pathophysiology, classification and diagnostics related to rotator cuff tears, management strategies, surgical techniques, and post-operative considerations.

Course Rationale

The purpose of this course is to provide participants with contemporary information on arthroscopic rotator cuff repair with comparative analysis of pathogenesis and management techniques to understand rehabilitation implications and maximize outcomes based on current research.

Course Goals and Objectives

Upon completion of this course, participants will be able to:

- 1. List and identify pertinent anatomical structures of the rotator cuff.
- 2. Recognize common pathologies related to the rotator cuff.
- 3. Define rotator cuff tear classification systems as they relate to location, size, shape, and tissue quality.
- 4. Distinguish clinical exam, imaging diagnostics, and conservative management for rotator cuff tears.
- 5. List the pre-operative and surgical preparation process for arthroscopic rotator cuff repair.
- 6. Recognize the common surgical instruments used during arthroscopic repair of a rotator cuff tear.
- 7. Outline the general steps of an arthroscopic rotator cuff tear repair procedure.
- 8. Identify some of the common variations in surgical technique for arthroscopic rotator cuff repair.
- 9. List surgical management alternatives to arthroscopic surgery for the treatment of rotator cuff tear.
- 10. Distinguish the surgical outcomes of arthroscopic rotator cuff repair including prognosis and surgical complications.

Course Provider - Innovative Educational Services

Provider Contact Information - information@cheapceus.com

Course Instructor - Sara Ziegele, PT, DPT, OCS

Conflict of Interest – No financial or non-financial conflict of interest exists for the presenter or provider of this course.

Target Audience – Athletic Trainers

Course Educational Level - This course is applicable for introductory learners.

Course Prerequisites - None

Method of Instruction - Distance Learning - Independent; Asynchronous online video-based home study

Location - Cheapceus.com

Date - Continuously available on-demand

Course Completion Requirements / Criteria for Issuance of CE Credits – Completion of viewing of 3 hour recorded video, and a score of 70% correct or greater on the course post-test.

Continuing Education Credits – Three (3) contact hours / .3 AOTA CEUs

Course Fee - \$34.95

Registration Information - To register for this program, please go to: Cheapceus.com

Special Needs Requests - Email: information@cheapceus.com or phone: 954-663-4101

Cancellation by the Learner – Learners may cancel their participation at any time and receive a full refund of all paid fees.

Cancellation by the Provider – Registrants will receive a full refund of all paid fees within 24 hours of provider cancellation.

Complaint Resolution – Please call 954-663-4101 (24 hours/day, 7 days/week) to speak with a live customer service agent. Our goal is to work with our customers to resolve all issues to the customer's satisfaction with just one phone call whenever possible.

Refund Policy - Unrestricted 100% refund upon request. The request for a refund by the learner shall be honored in full without penalty or other consideration of any kind. The request for a refund may be made by the learner at any time without limitations before, during, or after course participation.

Course Rationale

 The purpose of this course is to provide participants with contemporary information on arthroscopic rotator cuff repair with comparative analysis of pathogenesis and management techniques to understand rehabilitation implications and maximize outcomes based on current research

Goals & Objectives

Upon completion of this course, participants will be able to:

- List and identify pertinent anatomical structures of the rotator cuff.
 Recognize common pathologies related to the rotator cuff.
 Define rotator cuff are classification systems as they relate to location, size, shape, and tissue quality.
 Distinguish clinical exam, imaging diagnostics, and conservative management for rotator cuff tears.
 List the pre-operative and surgical preparation process for arthroscopic rotator cuff repair.
 Austor or the common surgical instruments used during arthroscopic repair of a Kustor cuff tear.

- Recomment for common surgers and the second second

- instituty some or the common variations in surgeca testingte for articloscopic rotatio cuff repair.
 List surgical management alternatives to arthroscopic surgery for the treatment of rotator cuff tear.
 Distinguish the surgical outcomes of arthroscopic rotator cuff repair including prognosis and surgical complications.

125

Conclusion

· Arthroscopic rotator cuff tear is a commonly utilized procedure in the surgical management of rotator cuff tear. By better understanding rotator cuff tear evaluation and the subsequent arthroscopic repair, rehabilitation professionals can provide more informed, quality care to their patients.

Q1

The rotator interval is bordered by which of the following structures?

- A.Biceps tendon, acromion, infraspinatus
- B. Teres major, pec minor, coracohumeral ligament

Which of the following is a common indication for

arthroscopic rotator cuff repair? A.Acute full-thickness tear B.Bursal-sided tear <2 mm in depth C.Partial articular-sided tears <25%

D.None of the above

- C.Head of the humerus, supraspinatus, first rib D.Coracoid process, supraspinatus tendon, subscapularis
- tendon

128

130

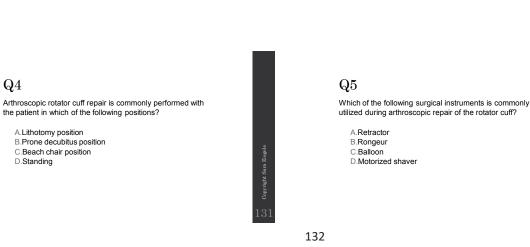

Q3

Which of the following is a rotator cuff tear classification referring to tear shape?

A.Crescent
B.Bursal
C.Zig zag
D.Articular

129

131

Q4

A.Lithotomy position

D.Standing

Q6

Which of the following surgical steps takes place BEFORE mobilizing the rotator cuff during an arthroscopic rotator cuff repair?

- A.Placement of suture anchors
- B.Passing the sutures C.Exposing the rotator cuff
- D.Tying the sutures

134

136

A.Acute traumatic tear B.Large chronic tear C.Small partial tear

An interval slide is most likely to be performed during

Which of the following surgical complications is associated

arthroscopic repair of which type of rotator cuff tear?

Q7

Q9

D.Mobile partial tear

133

Q8

Following arthroscopic repair of the rotator cuff, how long does it take for biologic healing of the rotator cuff tendon to the greater tuberosity?

A.2-4 weeks
B.4-6 weeks
C.6-8 weeks
D.8-12 weeks

135

with arthroscopic rotator cuff repair?

A.Shoulder stiffness B.Persistent pain C.Peripheral nerve injury

D.All of the above

Copyright Sara Ziegel

Q10

Revision surgery has identified which of the following as the most common mechanism of rotator cuff repair failure?

- A.Failure of fixation at the suture-tendon interface
- B.Loosening of anchor
- C.Fraying of suture
- D.Fracture of the humerus
