

# **Podiatric Surgical Procedures - Considerations, Application & Management**

## **Goals and Objectives**

### **Course Description**

"Podiatric Surgical Procedures - Considerations, Application & Management" is an online recorded video of a previously presented live CE webinar for occupational therapists and occupational therapy assistants that examines surgical procedures to manage common orthopedic pathologies of the distal lower extremity. This course includes a review of current literature relating to surgical procedures for tendons, ligaments, and bones of the foot and ankle.

### **Course Rationale**

The purpose of this course is to provide an understanding of the current trends in surgical procedures to manage degenerative, traumatic and non-traumatic pathologies of foot and ankle. The emphasis is comparative analysis of contemporary surgical techniques to restore distal lower extremity function through repair tendons, ligaments, and bones.

### **Course Goals and Objectives**

Upon completion of this course, participants will be able to:

1. List and identify common anatomical structures of the foot and ankle.
2. Distinguish degenerative, traumatic, and non-traumatic foot and ankle pathologies.
3. Identify emerging surgical techniques for foot and ankle orthopedic pathologies.
4. Identify contemporary theories regarding weight bearing after ankle fracture stabilization surgery.
5. Compare procedures to address chronic ankle instability.
6. Distinguish peroneal tendon stabilization from repair.
7. List surgical mechanisms to restore pes planus foot alignment.
8. Describe techniques to manage cartilage damage in the ankle.
9. List the indications for ankle arthrodesis.
10. Identify post-surgical considerations for procedures of the foot and ankle.

**Course Provider** – Innovative Educational Services

**Provider Contact Information** – [information@cheapceus.com](mailto:information@cheapceus.com)

**Course Instructor** - Jodi Gootkin, PT, MEd, CEAS

**Conflict of Interest** – No financial or non-financial conflict of interest exists for the presenter or provider of this course.

**Target Audience** – Occupational Therapists, Occupational Therapy Assistants

**Course Educational Level** – This course is applicable for introductory learners.

**Course Prerequisites** – None

**Method of Instruction** – Distance Learning – Independent; Asynchronous online video-based home study

**Location** - Cheapceus.com

**Date** – Continuously available on-demand

**Course Completion Requirements / Criteria for Issuance of CE Credits** – Completion of viewing of 3 hour recorded video, and a score of 70% correct or greater on the course post-test

**Continuing Education Credits** – Three (3) contact hours / .3 AOTA CEUs

**Course Fee** - \$34.95

**Registration Information** – To register for this program, please go to: [Cheapceus.com](http://Cheapceus.com)

**Special Needs Requests** – Email: [information@cheapceus.com](mailto:information@cheapceus.com) or phone: 954-663-4101

**Cancellation by the Learner** – Learners may cancel their participation at any time and receive a full refund of all paid fees.

**Cancellation by the Provider** – Registrants will receive a full refund of all paid fees within 24 hours of provider cancellation.

**Complaint Resolution** – Please call 954-663-4101 (24 hours/day, 7 days/week) to speak with a live customer service agent. Our goal is to work with our customers to resolve all issues to the customer's satisfaction with just one phone call whenever possible.

**Refund Policy** - Unrestricted 100% refund upon request. The request for a refund by the learner shall be honored in full without penalty or other consideration of any kind. The request for a refund may be made by the learner at any time without limitations before, during, or after course participation.

Innovative Educational Services is an AOTA Approved Provider of professional development. PD activity approval ID# 5471. This Distance Learning – Independent PD activity is offered at .3 CEUs; Introductory; Occupational Therapy Service Delivery; OT Foundational knowledge. The assignment of AOTA CEUs does not imply endorsement of specific course content, products, or clinical procedures by AOTA.

# **Podiatric Surgical Procedures: Considerations, Application & Management**

Presented By

Jodi Gootkin, PT, MEd, CEAS

### How To Obtain CEUs For This Course

- Course review and summary for post test at the end of the webinar.
- After watching the video go to [cheapceus.com](http://cheapceus.com)
- Complete the post test with score of at least 70%
  - May be retaken multiple times
- Submit online payment for course
- Print certificate

!

Copyright Jodi Gootkin

7

### Course Post Test

- Slides with “Consider This” icon in bottom right corner will be helpful in completing the post-test.

Consider This

Copyright Jodi Gootkin

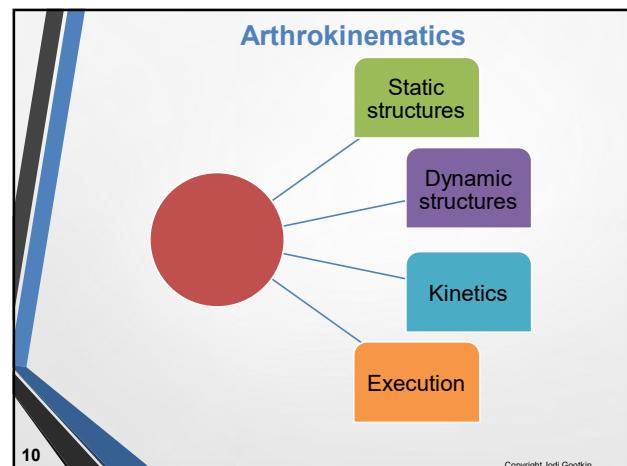

8

### Regions of the Foot

Hindfoot	Talocrural and Subtalar	Tibia, Fibula, Talus, Calcaneus
Midfoot	Transverse tarsal, talonavicular, calcaneocuboid, TMT	Navicular, Cuboid, 3 Cuneiforms, Metatarsals
Forefoot	Tarsometatarsal, MTP, PIP, DIP	Metatarsals, Phalanges, Sesamoids

Copyright Jodi Gootkin

9

10

### Pre-Operative Considerations

- ACS-NSQIP surgical risk calculator informs surgical decision making and patient informed consent.

Tobacco  
Age  
Diabetes  
HTN CHF COPD  
Creatinine  
Albumin  
Anemia

Cardiopulmonary  
Renal  
Infection

Kisana, H., et.al. (2022) Development of a Risk Stratification Scoring System to Predict General Surgical Complications for Patients Undergoing Foot and Ankle Surgery. *Orthopedics*, 45(2), 139-144.

Copyright Jodi Gootkin

11

### Anesthesia

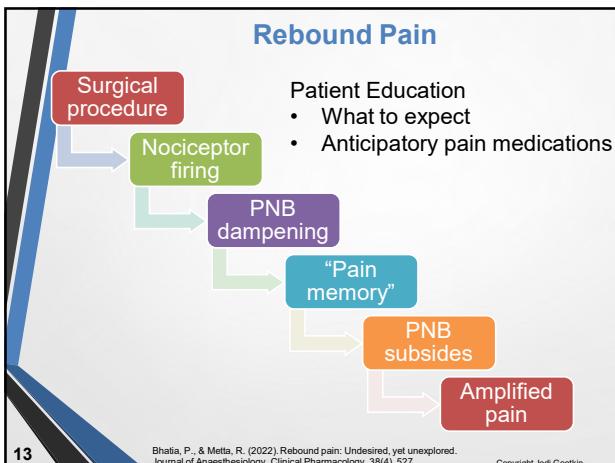

- No consensus on whether general or neuraxial anesthesia is superior for patients undergoing foot and ankle procedures.
- Peripheral nerve blocks may contribute to reduced pain levels and opioid use.
  - May mask compartment syndrome and VTE symptoms
  - Monitor for rebound pain

Quan, T., et.al. (2022) Evaluating the Association of Anesthesia Type With Postoperative Complications in Patients Undergoing Ankle Fracture Repair. *The Journal of Foot and Ankle Surgery*.

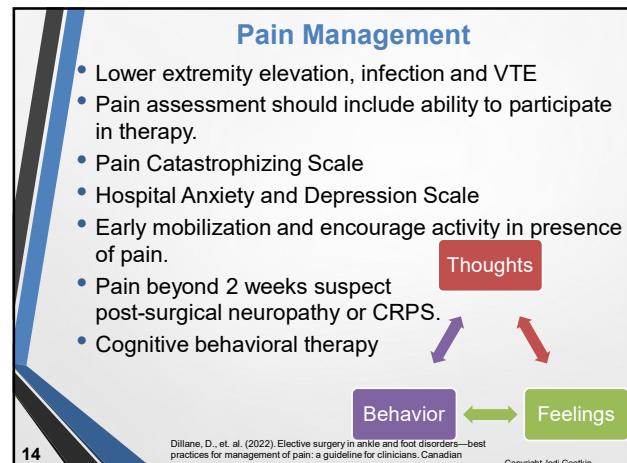

Maleen, S., et.al. (2021) Retrospective chart review of perioperative pain management of patients having surgery for closed ankle fractures using peripheral nerve blocks at a level one trauma center. *Pain Reports*, 6(1).

**Reproduction, reuse, or republication of all or any part of this presentation is strictly prohibited without prior written consent of both Innovative Educational Services and Jodi Gootkin.**

### Plantar Fasciotomy Considerations

- Lateral column pain
- Altered medial longitudinal arch height
- Fifth toe abduction strength
- Rehab progression per protocol
  - NWB → FWB in boot, AROM/isometrics ankle and toes
  - Supportive shoes, manual therapy, plantar fascia/gastrocnemius stretching, foot intrinsic strengthening, heel raise progression
  - FWB eccentric/resistance ankle exercise, balance, proprioception, joint mobilization
  - Return to impact activities

**25**

Liew, S. K., et.al. (2022). Foot Arch Changes after Endoscopic Plantar Fascia Release for Recalcitrant Plantar Fascitis. *Malaysian Orthopaedic Journal*, 16(2), 78.

Copyright Jodi Gootkin

25

### Gastrocnemius Recessions

- Surgical lengthening to restore plantarflexion ROM and normalize forces placed on plantar fascia with weight bearing.
- Strayer Method
  - Musculotendinous junction
- Baumann Procedure
  - Gastrocnemius muscle

**26**

Sanchez, T., et.al. (2023). Factors Associated With Poor Patient-Reported Outcomes in Isolated Gastrocnemius Recessions for Heel Pain. *Foot & Ankle Orthopaedics*, 8(2). Copyright Jodi Gootkin

26

### Gastrocnemius Recessions Considerations

- CAM boot, night splint, stretching, strengthening, manual therapy, gait and balance.
- Manual work to surgical scar.
- Gait training
  - Heel first initial contact position
  - Neutral foot alignment during stance phase
  - Sufficient DF during swing phase of gait
- Also indicated to manage Achilles tendinopathy, equinovarus, metatarsalgia, adult acquired flatfoot.

**27**

Copyright Jodi Gootkin

27

### Ankle Fracture Fixation Considerations

- No consensus on weight bearing restrictions and protection mechanisms postoperatively.

NWB 4-6 weeks	• Late
Within 3 weeks	• Early
Within 24 hours	• Immediate

**28**

Copyright Jodi Gootkin

28

### Weight Bearing (WB) Restriction Outcomes

Cohort	Early Protected WB Outcome
Elderly	Quality of life under reported No increased complications
Adults	Same complication rate Improved short term function Comparable function medium term
Adults	Improved short term function and overall health Comparable medium term

van Heesema, M. S., et.al. (2022). An overview on the treatment and outcome factors of ankle fractures in elderly men and women aged 80 and over: a systematic review. *Archives of Orthopaedic and Trauma Surgery*, 142(11), 3311-3325.

Khajay, R., et.al. (2022). Weight-bearing allowed following internal fixation of ankle fractures, a systematic literature review and meta-analysis. *Foot & Ankle International*, 43(9), 1143-1156.

Schubert, J., et.al. (2020). Effect on overall health status with weightbearing at 2 weeks vs 6 weeks after open reduction and internal fixation of ankle fractures. *Foot & Ankle International*, 41(6), 658-665.

Rogerio, R. G., et.al. (2021). Management of Ankle Fractures With Syndesmotic Disruption: A Survey of Orthopaedic Surgeons. *Cureus*, 13(7). Copyright Jodi Gootkin

Consider This

### Suture Button

- Designed to provide stability while maintaining physiologic motion.
- Allows earlier weight bearing and eliminates need for removal surgery.

Copyright Jodi Gootkin

31

### Syndesmosis Stabilization Considerations

- Rigid fixation procedures - NWB postoperatively
- Dynamic stabilization procedures - early weight bearing.
- No consensus on screw removal.
  - Concern for adjacent joint arthritis.
- Caution with activities applying vigorous translation and compressive forces to suture button fixation.

Kiepacki, K., et.al. (2022). Radiographic Assessment of Tibiofibular Syndesmosis Injury with Different Durations and Types of Fixation. *Journal of Clinical Medicine*, 11(21), 6331.  
Meekaew, P., et.al. (2022). Biomechanics comparison between endobutton fixation and syndesmotic screw fixation for syndesmotic injury ankle fracture; a finite element analysis and cadaveric validation study. *Journal of Orthopaedics*, 34, 207-214  
Copyright Jodi Gootkin

32

### Chronic Ankle Instability (CAI)

- History of at least 1 significant ankle sprain, episodes of “giving way” and/or recurrent sprain and/or “feelings of instability”, diminished function measured by validated tool.
- Mechanical insufficiency cases require surgery.

Anatomic Repair → Anatomic Reconstruction → Non-Anatomic Reconstruction

Gribble, P., et.al. (2013). Selection criteria for patients with chronic ankle instability in controlled research: a position statement of the International Ankle Consortium. *Journal of orthopaedic & sports physical therapy*, 43(8), 585-591. Copyright Jodi Gootkin

33

### CAI - Broström Anatomic Repair

- Brostrom – “gold standard”
  - Anterior talofibular ligament repair with or without calcaneofibular ligament repair
- Gould modification
  - Extensor retinaculum to reinforce repair
- Suture Tape Augmentation

Consider This  
Copyright Jodi Gootkin

34

### CAI - Anatomic Lateral Ligament Reconstruction

- Indicated when ligaments are inadequate for repair, general laxity, high demand activities, obesity.
- Allograft - semitendinosus
- Autograft - semitendinosus, gracilis, peroneus longus, patellar tendon

Spennacchio, P., et.al. (2022). Anatomic reconstruction of lateral ankle ligaments: is there an optimal graft option? *Knee Surgery, Sports Traumatology, Arthroscopy*, 1-11. Copyright Jodi Gootkin

35

### CAI - Non-Anatomic Reconstruction

- Indicated when anatomic repair has failed.
- Tenodesis using peroneus brevis tendon.
  - Watson-Jones, Evans, Chrisman-Snook procedures
- Risk of hindfoot malalignment, limited range of motion and early arthritis.

Copyright Jodi Gootkin

36

### Lateral Stabilization Considerations

- Protocols vary.
- Prolonged immobilization with modified Brostrom-Gould contributes to stiffness.

The diagram illustrates a timeline of lateral ankle stabilization protocols:

- Weeks:** Immobilization (Restricted WB), Removable orthosis AROM.
- Months:** Splint Subtalar ROM Proprioception Strengthening, Functional bracing Return to activities.

Curved arrows indicate a transition from immobilization to removable orthosis, and from splinting to functional bracing.

Al-Janabi, M. M., et.al. (2023). Early mobilization following elective ankle lateral collateral ligament reconstruction in adults. *The Foot*, 101988.  
Hermanns, C., et.al. (2020). Review of variability in rehabilitation protocols after lateral ankle ligament surgery. *Kansas Journal of medicine*, 13, 152.

Copyright Jodi Gootkin

37

Procedure	Outcome
Reconstruction with gracilis vs. modified Brostrom-Gould	Equivalent long-term function Reconstruction – less sprain recurrence
Brostrom suture tape augmentation with and without early rehab	Early rehab - without repair compromise High patient satisfaction
Brostrom with and without early accelerated rehab	With early rehab - greater short-term strength and proprioception gains

Su, T., et.al. (2022). Anatomic gracilis transfer using the autologous gracilis tendon achieved less sprain recurrence than the Brostrom graft procedure and delayed recovery in chronic lateral ankle instability. *Knee Surgery, Sports Traumatology, Arthroscopy*, 1-8.  
Martin, K. D., et.al. (2021). Suture tape augmented Brostrom procedure and early accelerated rehabilitation. *Foot & Ankle International*, 42(2), 145-150.  
Rhyu, H. S., et.al. (2023). Effects of accelerated rehabilitation exercise after mbo on ankle function and strength in ankle instability. *Revista Brasileira de Medicina do Esporte*, 29.

Copyright Jodi Gootkin

38

### Peroneal In-Office Needle Tendoscopy

- Can be utilized for diagnosis and treatment of tendinopathy.
  - Debride, groove deepening, scar resection, soft tissue release or repair
- Wide-aware local anesthesia no tourniquet (WALNT) allows patient participation.
- Immediate therapy participation.

Copyright Jodi Gootkin

39

### Peroneal Tendon Stabilization

- Tendon subluxation occurs with retinaculum rupture, lateral sprain, peroneus quarto/quintus and calcaneus malunion.
- Stabilization is achieved through retromalleolar deepening and repair of the superior peroneal retinaculum.

The diagram shows two methods of tendon stabilization:

- Indirect deepening:** Preserves fibrocartilage.
- Direct deepening:** (represented by an orange arrow pointing directly to the tendon)

Hwang, I. M., et.al. (2022). Open peroneal tendon stabilization with fibular groove deepening. *Arthroscopy Techniques*, 11(3), e347-e352.

Copyright Jodi Gootkin

40

### Peroneal Tendon Repair and Reconstruction

- Tear - longitudinal or incomplete rupture
- Rupture - complete discontinuity

The diagram classifies peroneal tendon injuries:

- Reparable:** debridement and tubularization of one or both tendons
- Irreparable:** Autograft with hamstrings or side-to-side tenodesis
- Last Option:** Flexor hallucis longus or flexor digitorum longus tendon transfer

van Dijk, P. A., et.al. (2018). The ESSKA-AFAS international consensus statement on peroneal tendon pathologies. *Knee Surgery, Sports Traumatology, Arthroscopy*, 26, 3005-3107.

Copyright Jodi Gootkin

41

### Peroneal Tendon Procedures

- Repair
  - Debridement and/or tenodesis
- Reconstruction
  - Semitendinosus or gracilis autograft
  - Beneficial biological and mechanical properties
- Tendon transfer
  - Flexor digitorum longus or flexor hallucis longus
  - Potential push-off strength deficits
- Superior peroneal retinaculum (SPR) repair

Copyright Jodi Gootkin

42

## Podiatric Surgical Procedures: Considerations, Application & Management

**Copyright Innovative Educational Services and Jodi Gootkin. All rights reserved.**

**Reproduction, reuse, or republication of all or any part of this presentation is strictly prohibited without prior written consent of both Innovative Educational Services and Jodi Gootkin.**

### Peroneal Procedures Considerations

- Monitor for DVT, paresthesia, and donor site.

<b>SPR Not Repaired</b>	Immobilization no more than 4 weeks AROM 2 weeks then goal-based rehab
<b>SPR Repaired</b>	NWB immobilization 2 weeks then WB immobilization 4 weeks AROM 2 weeks Tendon loading 6 weeks Cautious inversion/eversion, scar mobilization

van Dijk, P. A., et.al. (2018). The ESSKA-AFAS international consensus statement on peroneal tendon pathologies. *Knee Surgery, Sports Traumatology, Arthroscopy*, 26, 3096-3107. Copyright Jodi Gootkin

43

### Pes Planus Procedures

- Decreased medial longitudinal arch and hindfoot valgus with many different etiologies.
- Progressive Collapsing Foot Deformity is secondary to posterior tibialis tendon insufficiency.

Odebeck, I., et.al (2023). Surgically treated adult acquired flatfoot deformity: Registry-based study of patient characteristics, health-related quality of life and type of surgery according to severity. *Foot and Ankle Surgery*, 29(4), 367-372. Copyright Jodi Gootkin

44

### Medial Displacement Calcaneal Osteotomy

- Hindfoot valgus correction to achieve a neutral heel.
- Shift Achilles tendon moment arm medially alleviating hindfoot eversion force.
- Redistribute plantar pressures decreasing strain on spring and deltoid ligaments, and posterior tibialis tendon.

Consider This

Schon, L. C., et.al. (2020). Consensus for the indication of a medializing calcaneal osteotomy in the treatment of progressive collapsing foot deformity. *Foot & Ankle International*, 41(10), 1285-1295. Copyright Jodi Gootkin

45

### Pes Planus Procedures Considerations

- Immobilization and NWB post-op
- Progressive weight bearing in boot with ROM exercises
- Progressive weight bearing without boot
- Strengthening and proprioceptive exercise
- If flexor digitorum longus to posterior tibial tendon transfer is done, delayed PROM and strengthening.
- Weight loss

Copyright Jodi Gootkin

46

### Achilles Tendon Rupture Procedures

- Repair
- Reconstruction
- Combined procedures

I	partial ≤50%
II	complete < 3.0 cm gap
III	complete 3.0- 6.0 cm gap
IV	complete > 6.0 cm gap

Copyright Jodi Gootkin

47

### Achilles Tendon Repair

- Specific end-to-end suture technique utilized considers pull-out and gap resistance to facilitate healing.
- Calcaneal anchoring
- Augmentation techniques

Copyright Jodi Gootkin

48

47 Podiatric Surgical Procedures: Considerations, Application &amp; Management

**Copyright Innovative Educational Services and Jodi Gootkin. All rights reserved.**  
**Reproduction, reuse, or republication of all or any part of this presentation is strictly prohibited without prior written consent of both Innovative Educational Services and Jodi Gootkin.**

### Achilles Tendon Reconstruction Tendon Transfer

- Flexor hallucis longus (FHL)
  - Potential push-off strength deficits
- Peroneus brevis
  - Subjective foot strength reduction
- Plantaris

Danna, N. R., & Brodsky, J. W. (2020). Diagnosis and operative treatment of peroneal tendon tears. *Foot & Ankle Orthopaedics*, 5(2).

Willemse, L., et.al. (2023). Plantar intrinsic foot muscle activation during functional exercises compared to isolated foot exercises in younger adults. *Physiotherapy Theory and Practice*, 1-13.

Maffulli, N., et.al. (2023). Local tendon transfers for chronic ruptures of the Achilles tendon: a systematic review. *Journal of Clinical Medicine*, 12(2), 707.

Copyright Jodi Gootkin

49

### Achilles Tendon Reconstruction Autograft

- Open or minimally invasive procedures utilizing semitendinosus and/or gracilis.

Copyright Jodi Gootkin

50

### Achilles Tendinopathy Procedures

- Mid-portion
  - Debridement and tendon repair
  - > 50% tendon thickness removal requires reconstruction with flexor hallucis longus tendon
- Insertional
  - Debridement and osseous/soft tissue excision
  - > 50% insertion detachment requires calcaneal reinforcement
  - Gastrocnemius release

Copyright Jodi Gootkin

51

### Achilles Tendon Procedures Considerations

- Monitor incision/donor site and Thompson Test
- No consensus on protocols
- Initial immobilization NWB in plantarflexion
  - Progressive weight bearing with bracing
  - Heel gel cushion
- Avoid ROM beyond neutral in early rehab
- Begin heel raises bilaterally and concentric
- Delay stretching and eccentric exercise

Christensen, M., et.al. (2020). Resistance exercises in early functional rehabilitation for achilles tendon ruptures are poorly described: A scoping review. *Journal of Orthopaedic & Sports Physical Therapy*, 50(12), 681-690.

Saxena, A., et.al. (2022). Current consensus for rehabilitation protocols of the surgically repaired acute mid-substance achilles rupture: A systematic review and evidence-based consensus from the "GAIT" study group. *The Journal of Foot and Ankle Surgery*, 61(4), 855-861.

Gould, H. P., et.al. (2021). Postoperative rehabilitation following Achilles tendon repair: a systematic review. *Sports Medicine and Arthroscopy Review*, 29(2), 130-145.

Copyright Jodi Gootkin

52

### Achilles Tendon Procedures Outcomes

Diagnosis/Procedure	Outcome
Insertional achilles tendinopathy	Calcific vs. non-calcific similar outcomes
Debridement and calcaneal anchors	Low overall complications High return to activity rate
Acute achilles tendon tear	Low complication rate Significant Achilles Tendon Rupture Score increase
Open end-to-end repair	
Accelerated functional rehab	

Saxena, A., et.al. (2021). Insertional Achilles tendinopathy: analysis of 166 procedures and return to activity. *The Journal of Foot and Ankle Surgery*, 60(6), 1117-1124.

Lee, K. W., et.al. (2022). Immediate Weightbearing and Ankle Motion Exercises After Acute Achilles Tendon Rupture Repair. *The Journal of Foot and Ankle Surgery*, 61(3), 604-608.

53

### Anterior Ankle Impingement Arthroscopy

- Following trauma, fibrotic tissue and osteophytes form then become entrapped with ankle movement.
- Debridement allows recovery of motion.
- Immediate protected weightbearing and ROM/stretching/strengthening/proprioception.
- Monitor peroneal nerve.

Gianakos, E., et.al. (2021). Outcomes after arthroscopic surgery for anterior impingement in the ankle joint in the general and athletic populations: Does sex play a role? *The American Journal of Sports Medicine*, 49(10), 2834-2842.

54

## Podiatric Surgical Procedures: Considerations, Application & Management

**Copyright Innovative Educational Services and Jodi Gootkin. All rights reserved.**

**Reproduction, reuse, or republication of all or any part of this presentation is strictly prohibited without prior written consent of both Innovative Educational Services and Jodi Gootkin.**

### Osteochondral Lesion of Talus (OLT)

- Talus subchondral bone and cartilage damage following traumatic ankle injury or repetitive microtrauma.
- Surgical management includes cartilage repair, regeneration and replacement techniques.

Copyright Jodi Gootkin

55

### OLT - Cartilage Regeneration Procedures

- Bone Marrow Stimulation (BMS) encourages talus revascularization.
- Autologous chondrocyte transplantation
  - Donor site cells are grown in vitro and implanted into the talar dome defect.
  - Monitor donor site

**Small lesion**

- BMS
- Fibrocartilage

**Large defect**

- Chondrocytes or graft
- Hyaline cartilage

Krause, F., & Anwander, H. (2022). Osteochondral lesion of the talus: still a problem?. *EFOFT open reviews*, 7(6), 337-343.11

Copyright Jodi Gootkin

56

### OLT - Cartilage Replacement Procedures

- Osteochondral Autograft Transfer (OATS Procedure)
  - Monitor donor site
- Osteochondral Allograft Transplant
- Weight bearing delayed until radiographic evidence of bone healing.

**Splint NWB**

**Protected Progressive WB ROM**

**FWB**  
Closed chain exercise

**Single leg progression**  
Balance/Proprioception

**Sport specific training**

Copyright Jodi Gootkin

57

### OLT Procedure Considerations

- Best technique for immature bone?
- Immediate weight bearing and early ROM with BMS appears to decrease pain scores.
- Monitor for anterior ankle impingement syndrome.

Pallamar, M., et.al. (2022). Surgical treatment of atraumatic osteochondrosis dissecans of the immature talus—Clinical results and prevalence of radiographic joint degeneration after a median follow-up of 7.2 months. *Foot and Ankle Surgery*, 28(5), 557-563.

Daniłkowicz, R. M., et.al. (2021). Impact of early weightbearing after ankle arthroscopy and bone marrow stimulation on clinical results in patients with OA. *Orthopaedic Journal of Sports Medicine*, 9(9).

Viehöfer, A. F., et.al. (2021). Smoking is associated with anterior ankle impingement after isolated autologous matrix-induced chondrogenesis for osteochondral lesions of the talus. *Cartilage*, 13(1\_suppl.), 136S-1372S.

58

### Arthrodesis

- Indications
  - Pes planus with subtalar osteoarthritis
  - End-stage arthritis
  - Charcot arthropathy
  - Failed ORIF
  - Talus avascular necrosis
  - Congenital deformity
  - Bone tumors
  - Tarsal coalition with pain/surrounding joint degeneration
  - Neurologic conditions with apropulsive gait

Copyright Jodi Gootkin

59

### Tibiotalar

### Subtalar

### Triple

**Talus to tibia**

**Talus to calcaneus**

**Talus to calcaneus**

**Calcaneus to cuboid**

**Talus to navicular**

### Arthrodesis Considerations

- Orthobiologics may promote bone formation.
- Monitor wound healing
- No consensus on early mobilization
  - Glissan's principles – radiographic confirmation for weight bearing progression
- Nonunion and hardware failure risk
- Adjacent joint arthritis risk

```

61

### Total Ankle Arthroplasty

- Indicated for management of advanced arthritis.
- Goal to relieve pain without limiting range of motion.
  - Decreased risk of adjacent joint arthritis.
- Manage gait symmetry, pain, and return to activity expectations.

Copyright Jodi Gootkin

62

### Total Ankle Arthroplasty (TAA)

- Monitor wound healing
- If concurrent tendon transfers, strengthening and stretching restricted for approximately 3 months.
- No consensus on early mobilization

### Arthrodesis (AA) vs. Total Ankle Arthroplasty (TAA) Arthritis Outcomes

Study type	Outcome
Prospective RCT	<ul style="list-style-type: none"> <li>• Both cohorts - significant improvement on Ankle Osteoarthritis Scale and no significant improvement on SF-36</li> <li>• AA Higher complication rate</li> </ul>
Systematic review and meta-analysis	<ul style="list-style-type: none"> <li>• Both cohorts – similar outcomes for pain, gait, satisfaction, and Ankle Osteoarthritis Scale</li> <li>• TAA – greater range of motion and more significant improvement in American Orthopedic Foot &amp; Ankle Society score</li> <li>• TAA – higher complication and reoperation rate</li> </ul>

64

### Ambulation Devices

- Knee scooter vs. hands free crutch

Copyright Jodi Gootkin

65

### Sural Neuropathy

- Sensation to posterolateral aspect of the distal third of the leg, the lateral foot, and the fifth toe.
- Differential diagnosis includes S1 radiculopathy, Achilles tendinopathy, and compartment syndrome.

- Peroneal tendon harvest, stabilization, repair
- Achilles procedures
- Calcaneus, cuboid, 5th metatarsal fracture
- Tibia and calcaneus bone graft harvest
- Arthrodesis
- Lateral ankle stabilization procedures

### Conclusion

- Technology advances facilitate innovative surgical techniques to restore arthrokinematics and muscle function of the foot and ankle following injury.
- Continued research is needed to develop best practices for post-surgical rehabilitation to achieve functional outcomes and minimize complications.

67

1. What substance may be administered perioperatively to limit blood loss?

- A. Hyaluronic acid
- B. Platelet rich plasma
- C. Tranexamic acid
- D. Autologous matrix

68

Copyright Jodi Gootkin

68

2. What characteristic of nitinol technology allows it to provide dynamic stability?

- A. Low bending threshold
- B. Shape memory
- C. Rigid construct
- D. Narrow bridge design

69

Copyright Jodi Gootkin

69

3. Gastrocnemius recession is indicated to manage recalcitrant pain from what condition?

- A. Plantar fasciitis
- B. Ankle osteoarthritis
- C. Intra-articular ankle fracture
- D. Hallux valgus

70

Copyright Jodi Gootkin

70

4. Which of the following is a method of fixation to manage syndesmotic instability?

- A. Osteotomy
- B. Intramedullary nail
- C. Suture Button
- D. Needle tendoscopy

71

Copyright Jodi Gootkin

71

5. Which technique is considered the gold standard for patients with chronic ankle instability not responding to conservative management?

- A. Evans
- B. Gould augmentation
- C. Brostrom
- D. Thermal capsular shrinkage

72

Copyright Jodi Gootkin

72

6. Retromalleolar deepening with repair of the superior retinaculum could be performed to manage what condition?

- A. Hallux rigidus
- B. Pes planus
- C. Achilles tendon rupture
- D. Peroneal tendon subluxation

73

Copyright Jodi Gootkin

7. How does the medial displacement calcaneal osteotomy alleviate hindfoot eversion force?

- A. Shifts anterior tibialis moment arm
- B. Increases spring ligament forces
- C. Shifts Achilles tendon moment arm
- D. Decreases fibular forces

74

Copyright Jodi Gootkin

73

8. What is the goal of arthroscopy to manage anterior ankle impingement?

- A. Tighten the anterior joint capsule
- B. Remove osteophytes and fibrotic tissue
- C. Repair ligamentous laxity
- D. Implant bone matrix

75

Copyright Jodi Gootkin

75

9. Bone marrow stimulation is a surgical option to manage what condition?

- A. High ankle sprain
- B. Achilles tendon rupture
- C. First metatarsophalangeal arthritis
- D. Osteochondral lesion of talus

76

Copyright Jodi Gootkin

10. Altered sensation of the posterolateral aspect of the distal leg and lateral foot along the fifth metatarsal might indicate injury to what nerve?

- A. Sural
- B. Tibial
- C. Deep peroneal
- D. Saphenous
